

Trees for Healthy Kids and Community

Mitchell Elementary | May 1, 2011

On this day, 35 trees were planted along the north and northwest edges of campus to reduce noise and air pollution and improve stormwater management.

These trees form a living barrier between the school and highway, protecting the environment and human health. Over 50 members of the Mitchell Elementary community participated in planting, teaching, and learning, in the hope that all who see these trees will be inspired to protect and improve our environment.
