

INSTITUTE FOR ENVIRONMENTAL SOLUTIONS

October 21, 2014

Institute for Environmental Solutions TV episodes on urban forestry

By John Kelly

October 21, 2014

Denver, CO. Local environmental non-profit, The Institute for Environmental Solutions (IES) announced that two associates, John Kelly and Sean Mangus, will appear on Trinity Broadcasting Network KPJR-TV38's "Joy in Our Town." Both were asked to participate and discuss the problems and benefits of urban forestry. The first session, titled "Urban Forestry" focuses on how the use of urban forestry can impact both the environment and the community. The second session titled, "Trees Make Cents" focuses on how urban forestry can influence local economy and education. The air dates and program titles are as follows:

Urban Forestry, Monday, October 24, 2014

The Urban forestry discussion included a description of urban forestry and those involved, information on the environmental benefits of urban forests, and the ways communities interact with their local urban forests.

Trees Make Cents, Monday, November 3, 2014

Trees Make Cents included what businesses and local communities can gain and lose by having an active urban forestry program, and how urban forestry can be used as a tool for improving local education.

The programs are each 15 minutes. KPJR-TV38 is channel 230 on Comcast, channel 372 on Direct TV, and channel 260 on Dish Network. IES would like to thank KPJR-TV38 for the opportunity to get involved with their program and discuss these important environmental issues. Urban forestry is an important issue that faces communities concerned with economic growth, ecological health, and education. IES was grateful to have the opportunity to participate in the program and to stimulate the public discussion about the costs and benefits of using urban forestry to improve local communities.

About IES

The Institute for Environmental Solutions is an independent non-profit organization that engages stakeholders to deliver technically sound solutions to complex environmental and health problems, without unwanted side effects. The Tree Project's mission is to improve the environmental quality, community health, and local economies of Colorado cities using tree science.
